

GOLD EMPIRE 🏰

Survive First

THE GOLD TRADER'S SURVIVAL SHEET

*The one page that decides whether your account is still here
next month — five rules, one formula, and a 20-second check
you run before every trade.*

BY MATTHEW · GOLD EMPIRE

You don't have a signal problem

It's late. The house is quiet, everyone you love is asleep, and you're still awake in the blue light of a screen — watching a gold chart that will not do what you told yourself it would.

I know that room. I've sat in it more nights than I'd like to admit — not because I read the chart worse than you, but because early on nobody told me the one thing I'm about to tell you. So here it is, before I hand you the sheet:

You don't have a signal problem. You have a survival problem.

No analysis on earth is right every time. None. There is no channel, no indicator, no "guru" on a livestream that wins every trade — and anyone who promises you that is selling a feeling, not a fact. So losing a trade was never the failure. Losing trades are the weather; they keep coming as long as you trade gold.

The only question that decides whether you're still here next year is this: **when a loss comes — and it will — how much does it cost you, and are you still in the game tomorrow?**

I learned that the expensive way. My first accounts didn't die from one bad call — they bled out because I kept sizing up to win it back, until there was nothing left to bet. The day I started surviving was the day I stopped trying to be *right* and started protecting what I had.

That's what this sheet protects. Print it. Keep it next to your screen. Run it before you click.

WHY ACCOUNTS REALLY DIE

Accounts rarely blow up in one explosion. They die in a loop, running faster each turn:

Loss → Fear → Revenge → Blow-up

↺ BACK TO THE TOP

Only **one** of them — the loss — comes from the market. The tight chest, the position closed too early, the doubled lot size taken in anger, the empty account — all of that lives inside you. Three of the four links, you build with your own hands. Bad luck you can't touch. A loop you built, you can interrupt. Here's how.

Five rules that keep you alive

Rule 1. Decide what one trade can cost you *before* you take it.

Pick a small, fixed amount you're willing to lose on a single trade, and decide it while you're calm — not at 2 a.m. with your heart pounding. A common teaching example is risking no more than 1% of your account on any one trade. On a \$1,000 account that's \$10. That "too small to matter" is exactly what keeps you alive through a losing streak.

Rule 2. Your stop-loss is set by plan, not by hope.

Place your stop-loss *before* you enter, at the price that proves your idea was wrong — not at the price where the pain gets unbearable. A stop is not an admission of failure. It's the seatbelt you put on before the drive, not during the crash.

Rule 3. Size the trade backward from the loss you can survive.

Most traders pick a lot size first and discover the risk after. Do it the other way around — your position size is an *output*, not a guess:

$$\begin{aligned}\text{Risk in \$} &= \text{Account} \times \text{your fixed risk \%} && \text{(Rule 1)} \\ \text{Position size} &= \text{Risk in \$} \div (\text{stop distance} \times \text{value per point})\end{aligned}$$

If a setup needs a wider stop, the size gets *smaller* — not the risk bigger. You never widen the risk to fit the trade you want.

Rule 4. One loss never buys a bigger trade.

The moment after a loss is the most expensive moment in trading. The urge to "win it back now" — bigger, faster, angrier — is the revenge trade, and it turns a small red day into a blown account. A loss is not a debt the market owes you. Take the small loss. Close the laptop if you have to.

Rule 5. After a rough day, you rest. You don't chase.

When you've taken two or three losses in a row, the problem is no longer the chart — it's the person reading it. Step away. The market will still be there tomorrow. Staying out is a trade decision too, and often the best one you'll make all day.

THE 20-SECOND CHECK — RUN IT BEFORE EVERY CLICK

Read these five out loud before you enter. If the answer to any one is **no**, you don't have a trade yet.

- ☐ I know the **exact dollar amount** I'm risking, and it fits Rule 1.
- ☐ My **stop-loss is already set**, at a price my plan chose — not my fear.
- ☐ My **position size was calculated** from the stop, not picked by feel.
- ☐ This trade is **not** an attempt to win back a previous loss.
- ☐ I'm calm enough that I'd take this exact trade tomorrow morning.

Five yeses, and you're trading your plan. One no, and you're about to trade your feelings. That single pause — twenty seconds — is the cheapest edge in this entire business.

THE HARD PART NOBODY SELLS YOU

Reading these rules is easy. *Keeping* them at 2 a.m., alone, with a red trade and your finger on the button — that's the hard part. Rules on paper don't hold your hand when it hurts. People do.

That's the whole reason **Gold Empire** exists — not to hand you a magic signal, but to be the room where the rules actually get kept. Real entries, in real time, with the reasoning shown and the risk stated out loud. Wins *and* losses, in the open — because a room that only shows you winners is lying to you.

How to step inside the live room

The room is kept free for members who set up a trading account with one of our partner brokers — **VT Markets** (or **PU Prime**) — through the link below. Same brokers I trade on. It costs you nothing extra, and it's what keeps the room free for everyone in it.

1 • Open your VT Markets account here → vtm.pro/la-com/en/Matthew

VT Markets not available in your country? Use PU Prime instead → puvip.co/la-partners/Matthew

2 • Send a screenshot of your account to **@Matthew_TraderGold** on Telegram to unlock access.

No rush, and no pressure. Keep the sheet either way — it works whether you ever join or not.

Survive first. Everything else comes after.

— Matthew, Gold Empire 🏹

Risk warning. Trading Forex and gold (XAU/USD) carries a high level of risk and can result in the loss of your capital. Nothing in this document is financial advice or a promise of profit. This sheet is educational and about protecting capital. Only trade with money you can afford to lose.
